***Steton Provides Burger King Corporation Leading Solutions
to Automate Inspection & Auditing Processes***

Steton will provide Burger King Corporation with the ability to view reports for trends and other key analysis to ensure quality.

ST. GEORGE, UTAH — January 16, 2004 — Steton Technology Group announced today that it recently finalized plans to provide its industry-leading mobile auditing software to Burger King Corporation to support Quality Assurance in supplier facility and product audits for the corporation. A leader in the fast-food industry, the Burger King system employs more than 340,000 employees and operates more than 11,330 restaurants in all 50 states, and 57 countries and territories around the world.

“We looked at a number of systems before going with Steton,” stated Teri Nagle, Quality Assurance Manager for Burger King Corporation. “We found that Steton offered the most user-friendly solution to automate quality assurance supplier facility and product audits, and was ahead of its competitors in meeting our needs from a technological point of view.”

Currently, audits are performed by various third parties via different computer systems and then manually emailed to its corporate Restaurant Support Center in Miami. This method has been problematic because the data is submitted in a variety of formats, with no common database where the results can be viewed and maintained.

“With our current method of auditing, it takes weeks to get the information from the auditors into a workable format to view reports for trends and other key analysis,” stated Nagle. “Steton’s solution will make these results more readily available.”

“A key benefit of Steton’s software is having a database that manages all the information contained in the audit data,” stated Nagle. “In addition, immediate follow-up on corrective action items is a feature that we needed in order to complete our inspection management processes.”

Steton Vice President of Sales and Marketing, Dennis Derrick, expressed Steton’s enthusiasm in working with the Burger King Corporation. “The addition of Burger King Corporation to our client base is obviously a tremendous accomplishment for Steton. We’re confident that Steton’s leading-edge technology will help Burger King Corporation maintain and further enhance their prominent position in the food services industry.”

Founded in 1996, Steton Technology Group, Inc. was established to meet the need for automated safety and quality assurance systems. Its flagship products are the Steton Quality Suite® and the Steton Safety Suite™. In addition to its software products, Steton offers supporting services that provide significant overhead cost savings to its clients, including software and system engineering, data and network hosting, project management and solutions consulting.
