**Steton Inks Deal With Louisiana Department of Health  
and Hospitals, Office of Public Health**

*Steton Quality Suite® will automate inspection process  
for more than 35,000 facilities in State of Louisiana*

**St. George, Utah — July 31, 2003** — The Steton Technology Group announced today that it recently won a bid to provide the Louisiana Office of Public Health with an automated inspection and reporting system that will, according to State Officials, “...more effectively ensure that public health protection and quality assurance programs are meeting our responsibility for the overall public health of the entire State of Louisiana.”

“The Louisiana Office of Public Health is excited to utilize Steton’s technology to maximize our inspection capabilities, manage our many quality and food safety programs, and provide status reports on our Web site to the general public, stated James Antoon, Chief of Sanitarian Services. “ We’re confident that this leading-edge technology will help us in our efforts to continually improve the service we provide to the citizens of Louisiana.”

Louisiana public health programs range from regulation of individual sewage disposal to inspection of restaurants, markets, schools, day care centers, hospitals, nursing homes, milk producers and processors, food manufacturers, food warehouses and seafood processors. With more than 75,000 inspections to conduct every year, the Office of

Public Health was looking for a solution that would automate the inspection process for its 250 sanitarians and inspectors through the use of mobile computing technology.

“ The Steton Technology Group is very pleased to play a role in making the health and safety programs for the State of Louisiana the best they can be,” stated Dennis Derrick, Vice President of Sales and Marketing for Steton Technology. “ Our technology helps organizations contain risk, reduce losses, improve quality, and dramatically enhance the efficiency of quality and safety programs. The people of Louisiana will be well-served by this enhancement to their public health programs.”

Founded in 1996, Steton Technology Group, Inc. was established to meet the need for automated safety and quality assurance systems. Its flagship products are the Steton Quality Suite® and the Steton Safety Suite™. In addition to its software products, Steton offers supporting services that provide significant overhead cost savings to its clients, including software and system engineering, data and network hosting, project management and solutions consulting.
