

PREDATOR

Ruggedised Pocket PC2002 iPAQ

The Predator is a Pocket PC 2002 system based on the latest HP iPAQ PDA computer and is fully sealed with a tough transparent screen membrane fused to a special UV stable polymer top. The Predator was originally designed for Military and Field Data collection but can be used with any applications written for Microsoft's Pocket PC 2002 operating system. A recessed high quality connector ensures you will not damage the serial port. Industry feedback documents that the typical lifespan of a standard HP iPAQ is 3 months as a mobile field-mapping device. Loss of your valuable data when a standard iPAQ is dropped or there is ingress of water and dust far outweighs the initial cost of the Predator.

The Predator is also available in high visibility green and red, and jungle and desert schemes to meet military requirements.

A dual RS232 port version of the Predator is available for clients wishing to connect a wide range of external sensors.

Features.	Benefits.
<ul style="list-style-type: none"> • Hi-impact Plastic Base 	Maximum strength and durability
<ul style="list-style-type: none"> • UV stable top with tough transparent moulded screen 	Will last for years
<ul style="list-style-type: none"> • Recessed Lemo OB serial port 	No damage to flimsy CE port connector
<ul style="list-style-type: none"> • Full sunlight readable colour 	Exceptional outdoor use
<ul style="list-style-type: none"> • "PosiSeal" Technology 	Excellent Dust and Water Seal
<ul style="list-style-type: none"> • Integrated stylus Garage 	Can't lose stylus
<ul style="list-style-type: none"> • Non slip Case 	Aids grip
